Since image sketching isn't available right now, let me **draft a text-based wireframe** of your forensic application dashboard. This way you can visualize the layout and flow for your presentation.

🖼️ Sample UI Wireframe (Text-Based)

Code

```
-------------------------------------------------------------
|  Forensic AI Dashboard                                    |
-------------------------------------------------------------
|  [Case List Sidebar]                                      |
|   - Case #001: Disk Image Analysis                        |
|   - Case #002: Memory Dump                                |
|   - Case #003: Network Capture                            |
|   - [+ New Case]                                          |
-------------------------------------------------------------
|  [Main Panel]                                             |
|                                                           |
|  ┌─────────────────────────────────────────────────┐      |
|  | Case Overview                                   |      |
|  | - Case ID: 001                                  |      |
|  | - Investigator: Chinatu Uzuegbu                 |      |
|  | - Evidence: disk_image.dd                       |      |
|  | - Status: In Progress                           |      |
|  └─────────────────────────────────────────────────┘      |
|                                                           |
|  ┌─────────────────────────────────────────────────┐      |
|  | Anomaly Explorer                                |      |
|  | - Hidden files detected (Severity: High)        |      |
|  | - Suspicious process in memory (Severity: Med)  |      |
|  | - Unusual network port activity (Severity: High)|      |
|  | [View Details] [Add to Report]                  |      |
|  └─────────────────────────────────────────────────┘      |
|                                                           |
|  ┌─────────────────────────────────────────────────┐      |
|  | Timeline Visualization                          |      |
|  | [Interactive timeline chart here]               |      |
|  | - 10:15 AM: User login                          |      |
```

```
|   | - 10:20 AM: File deletion                          |    |
|   | - 10:25 AM: Network connection to external IP  |    |
|   └──────────────────────────────────────────────┘    |
|                                                       |
|   ┌──────────────────────────────────────────────┐    |
|   | Report Export                                |    |

```

✨ Key Features in the Wireframe

- **Case List Sidebar:** Quick navigation between cases.
- **Case Overview:** Metadata about the current investigation.
- **Anomaly Explorer:** Central place to view anomalies with severity scores.
- **Timeline Visualization:** Interactive chart showing sequence of events.
- **Report Export:** One-click generation of forensic reports.

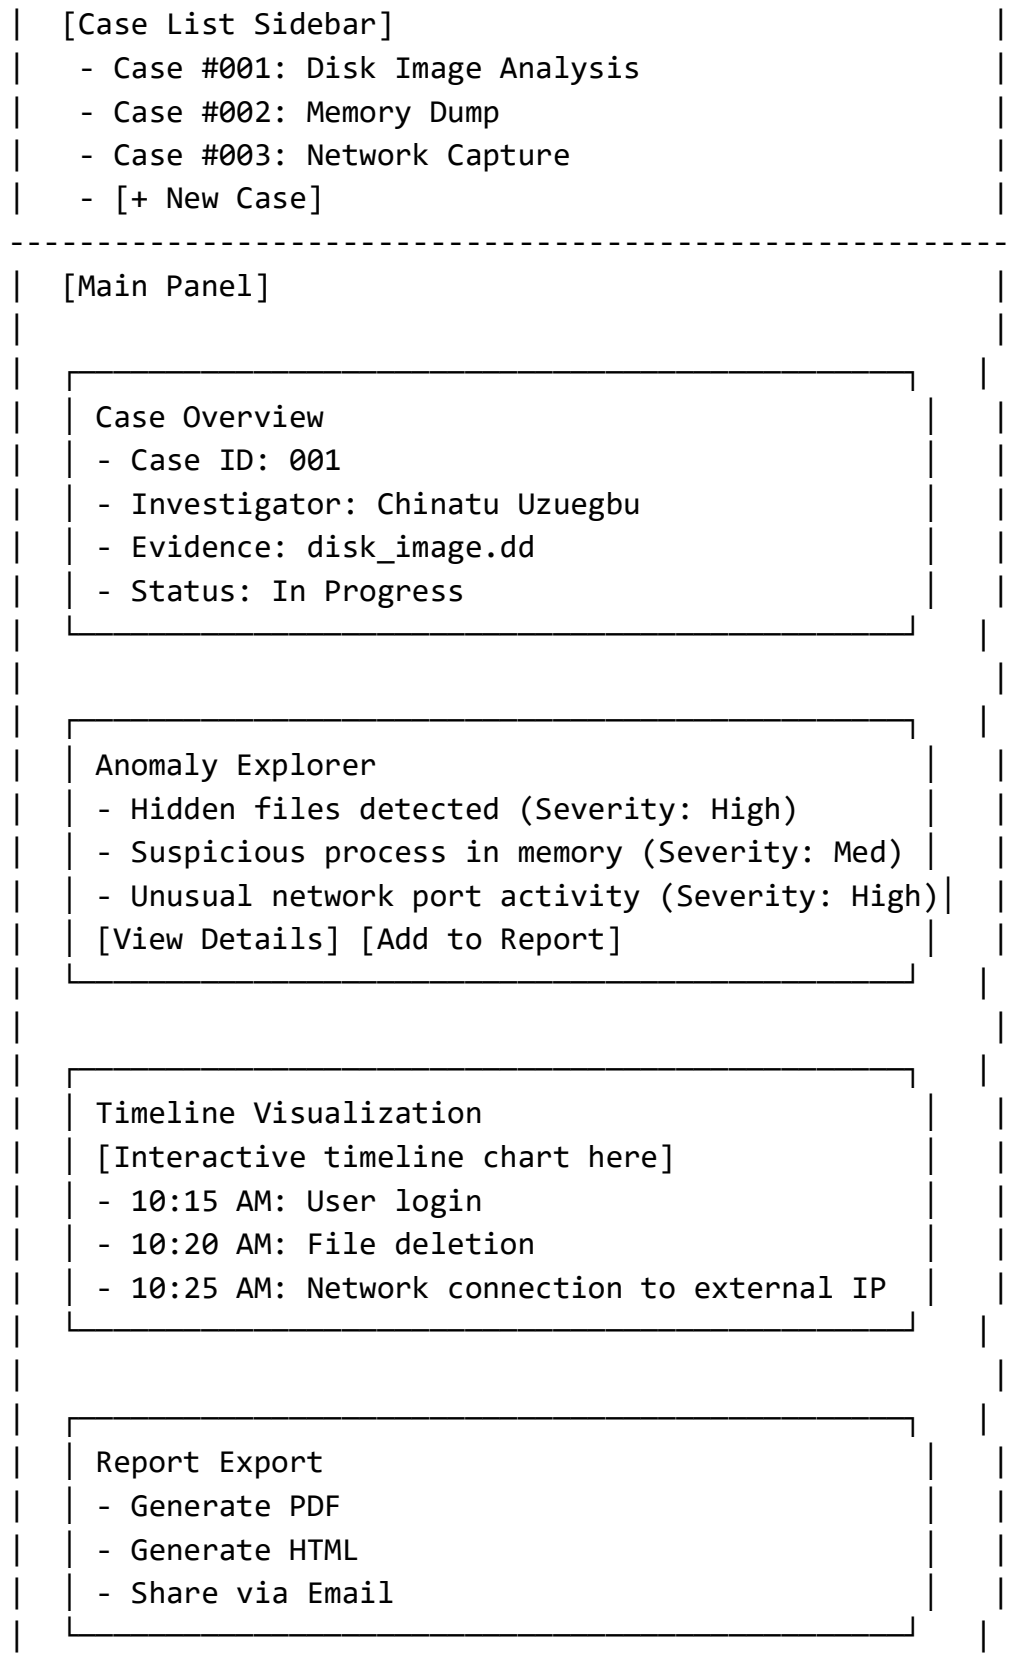

This wireframe gives you a **presentation-ready structure**: it shows how investigators would interact with your AI-driven forensic platform, moving from evidence ingestion → anomaly detection → timeline reconstruction → reporting.

👉 Next step: I can help you **map this wireframe to actual frontend components** (React/Angular structure, API endpoints) so you can start building the demo quickly. Would you like me to break down the **frontend component hierarchy** for this dashboard?Since image sketching isn't available right now, let me **draft a text-based wireframe** of your forensic application dashboard. This way you can visualize the layout and flow for your presentation.
